Original Question

How can students compare two software architectures?

Students' Issues with Scientific Working^[RHB06]

- “Students had problems constructing well-formulated [...] questions.”
- “Students used limited criteria for identifying the best or better evidence [...]”
- “Students used a very limited number of search terms.”
- ...

Many students lack knowledge about scientific working and experiment design.

Original Question Revised

How can students compare two software architectures?

How to support students in scientific working and experiment design?

How to Support Students in Scientific Working and Experiment Design?

- Evidence-Based Software Engineering (EBSE) [KDJ04]
- Scientific Method [SMOP]
- SEED [JR08]
- Evidence Map [EBS]
- Workflow Graph [RB08]

Tools not tailored for students

We created a **process** and **guiding documents** for students.

Process as Guidelines for Students

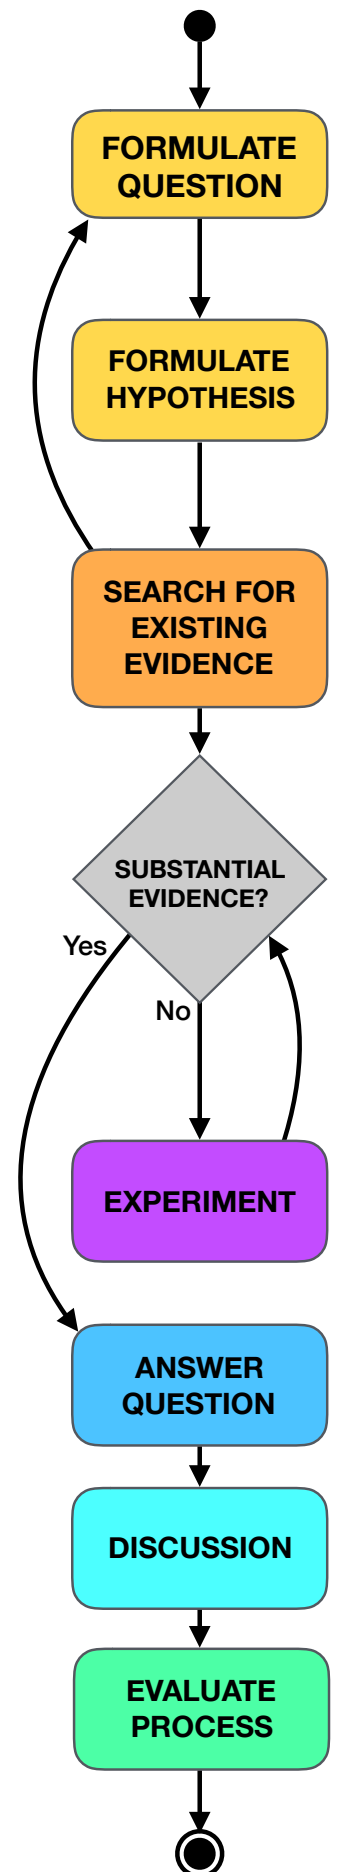

EBSE Process Steps:

1. Ask an answerable question.
2. Find the best evidence that answers that question.
3. Critically appraise this evidence.
4. Apply the evidence (and critical appraisal).
5. Evaluate the performance in previous steps.

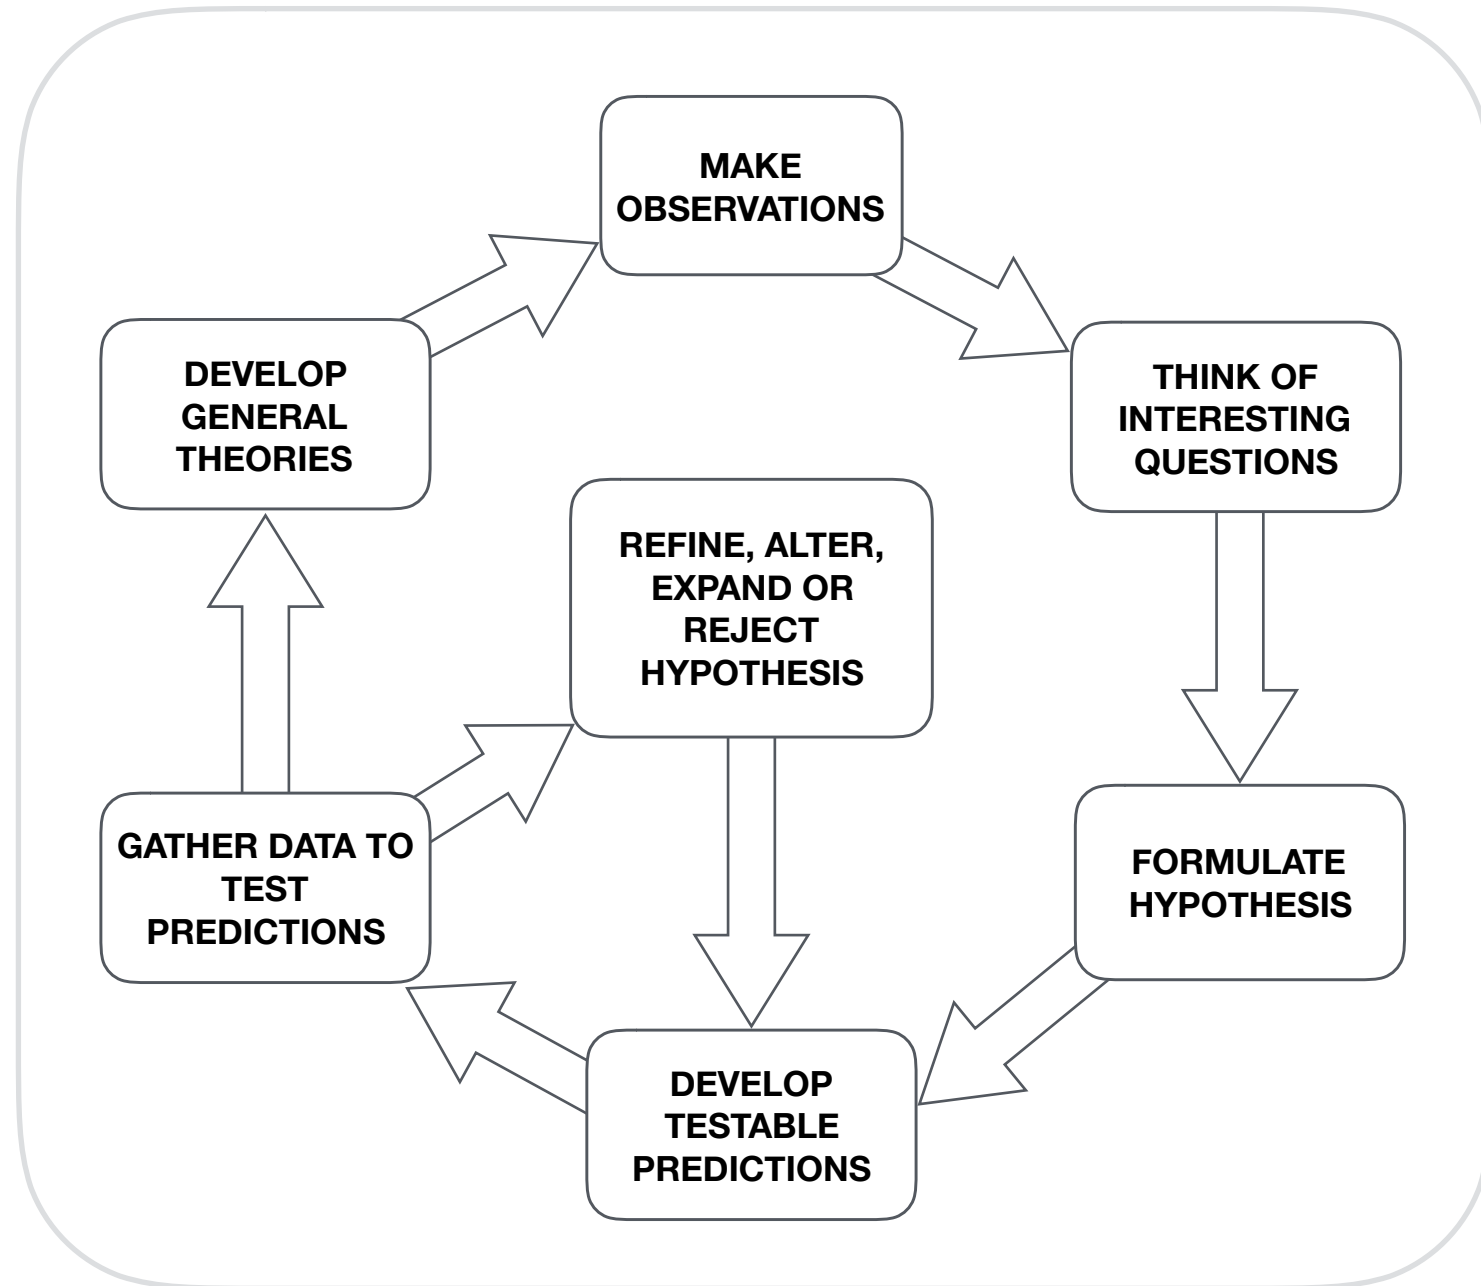

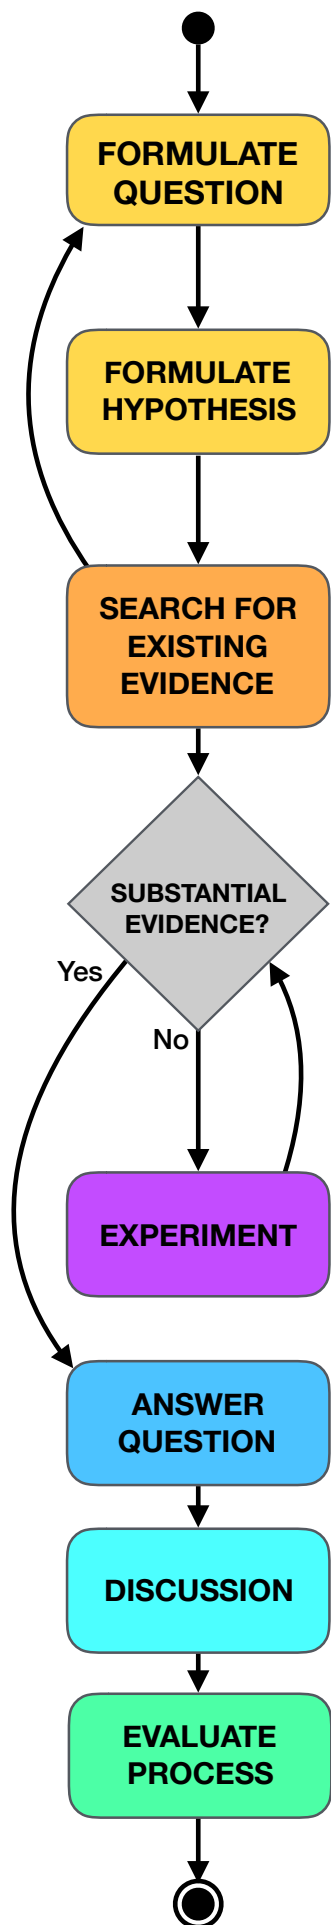

Process as Guidelines for Students

EBSE Process Steps:

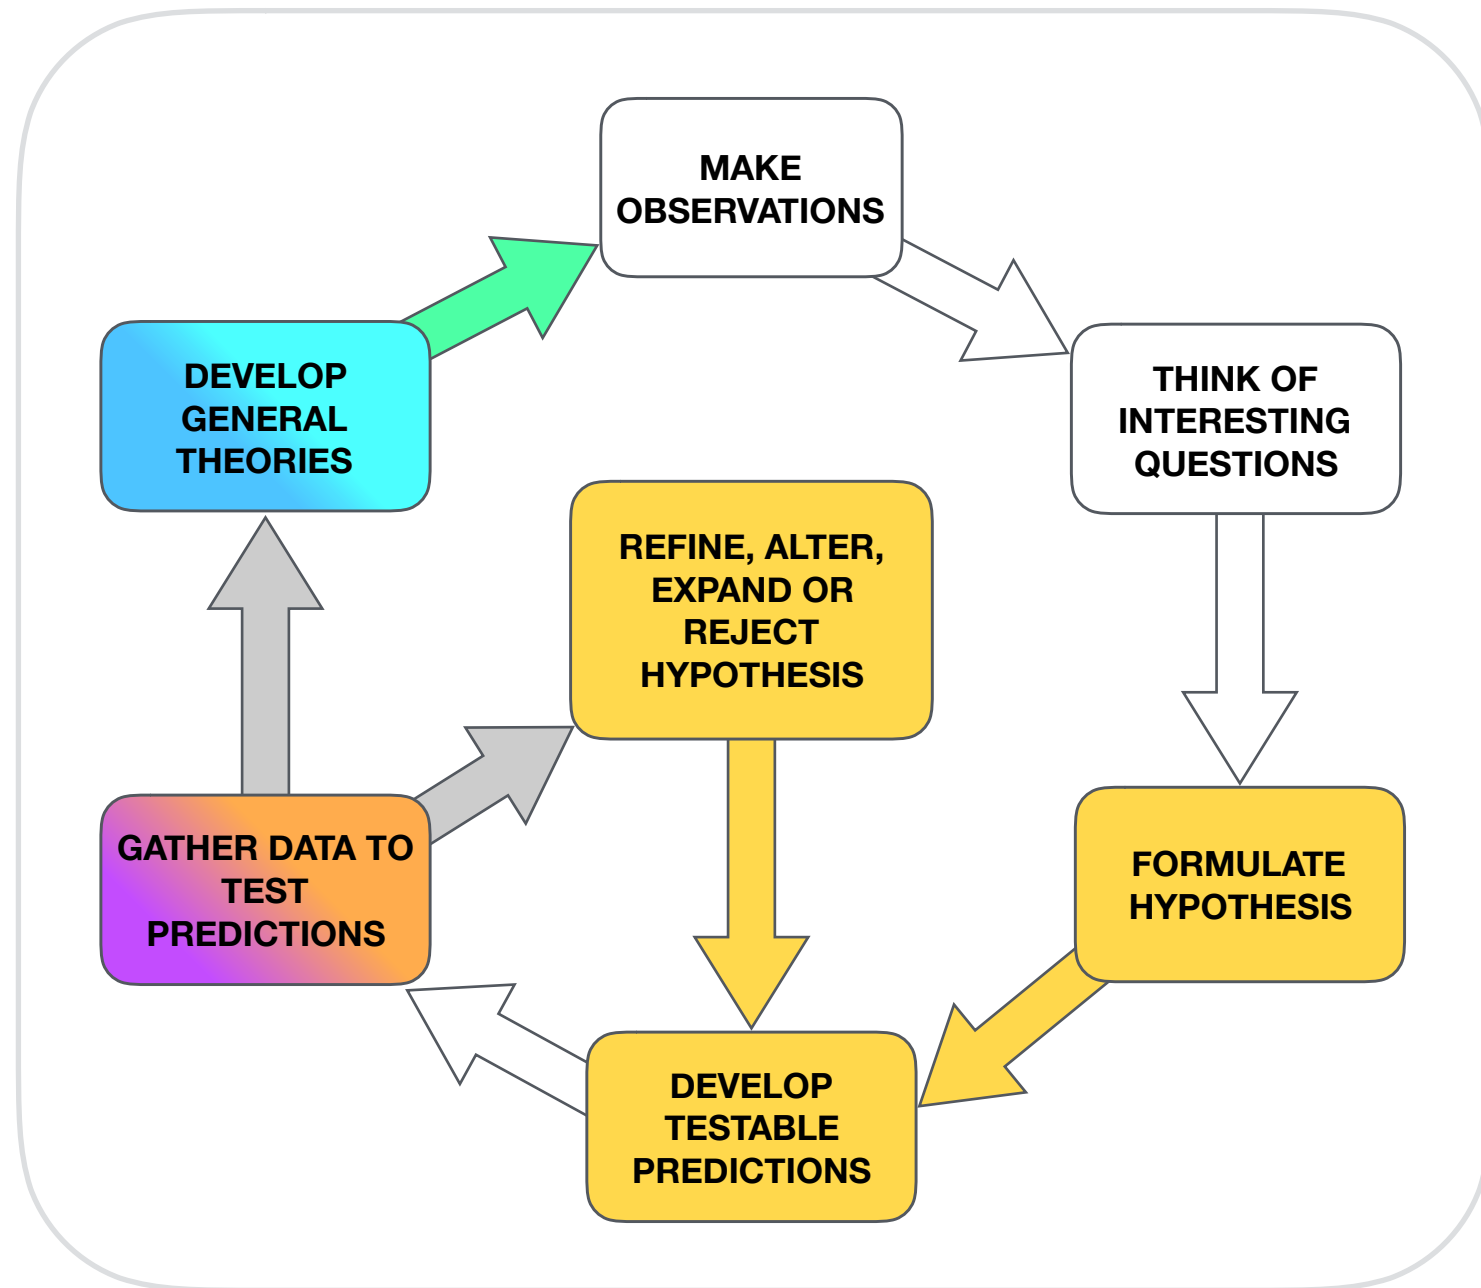

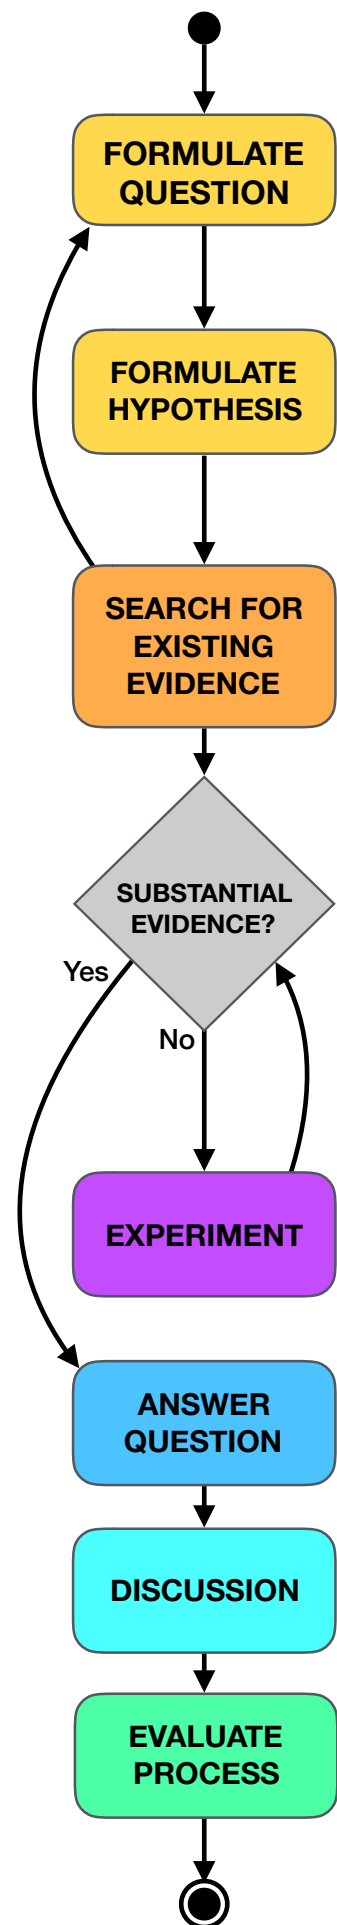

1. Ask an answerable question.
2. Find the best evidence that answers that question.
3. Critically appraise this evidence.
4. Apply the evidence (and critical appraisal).
5. Evaluate the performance in previous steps.

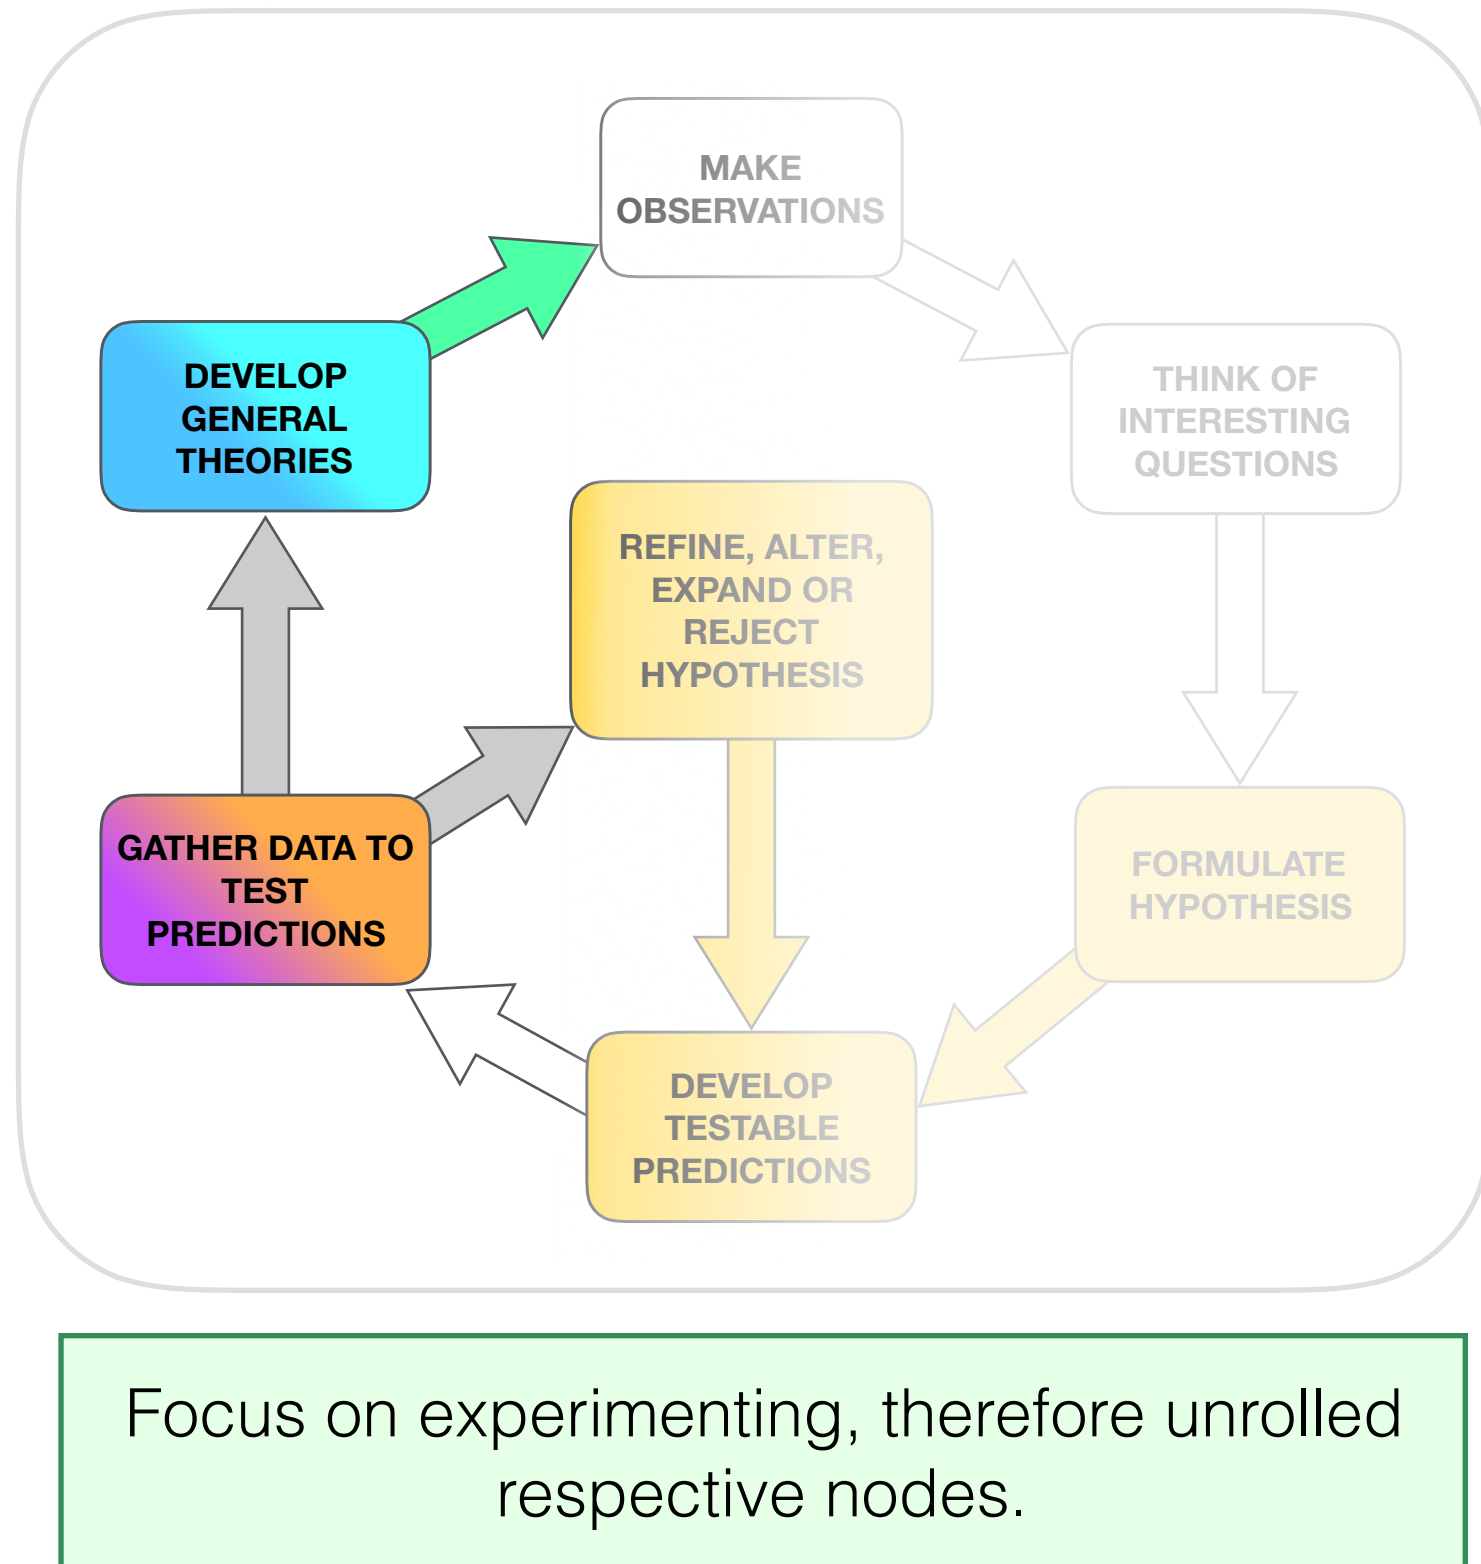

Scientific Method

Future Work

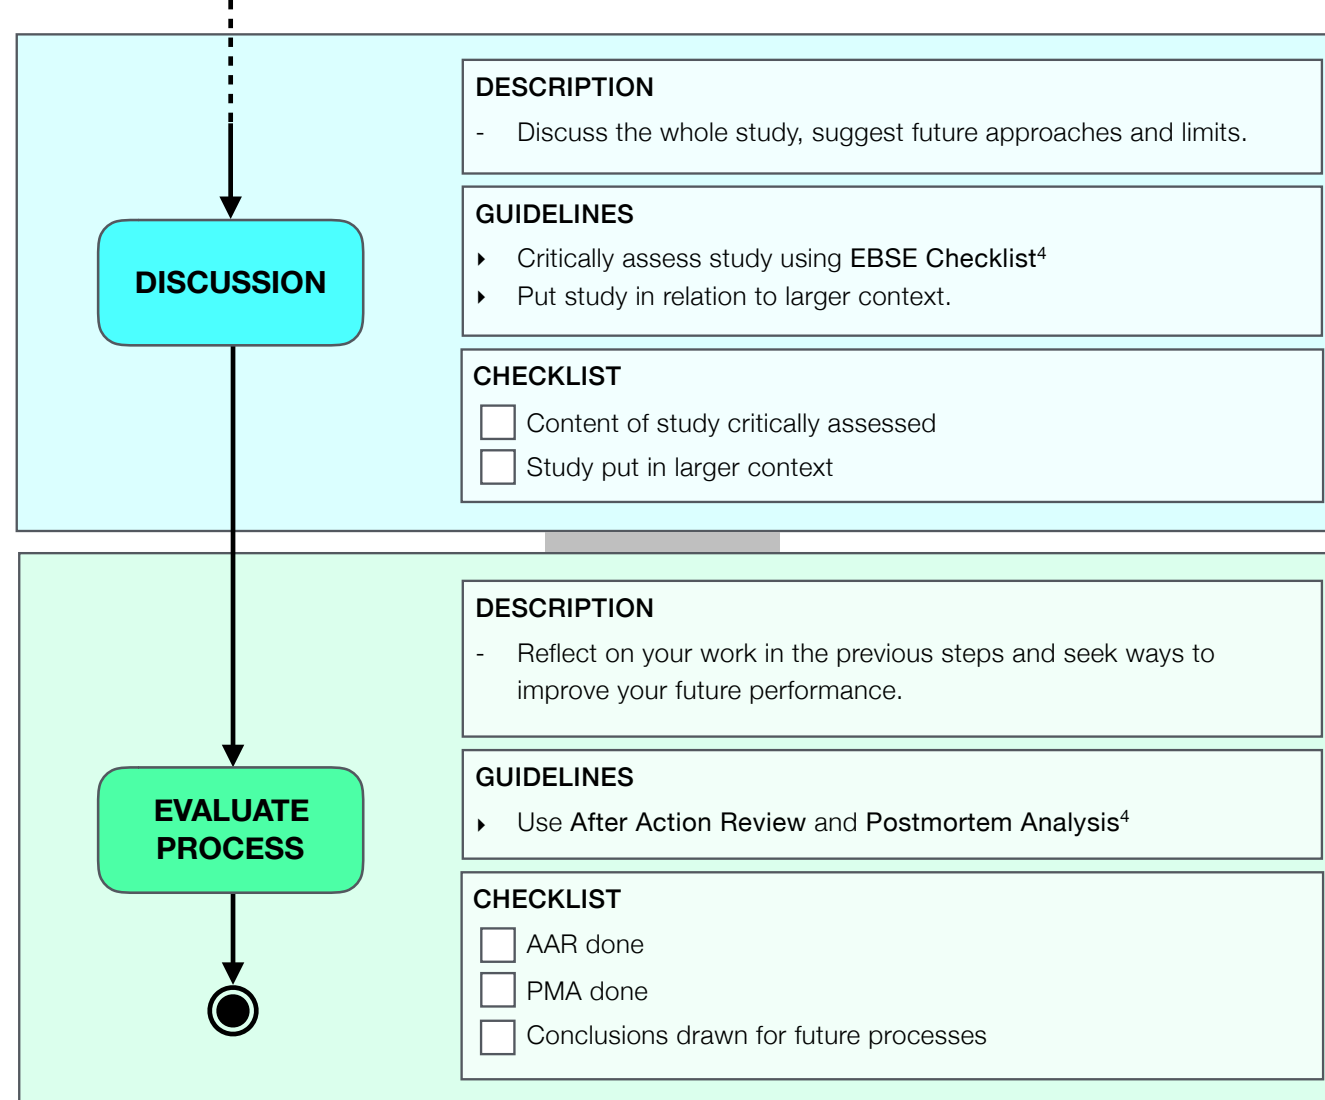

- Digitalize Briefing Form
- Should be evaluated using students' thesis
 - (Two upcoming, maybe four)
 - ➔ Revise Process Document tools
 - ➔ Refine Briefing Form
- Scientific Working Basics missing in Education?

Study Appraisal Checklist

1. Is there any vested interest?
 - ▶ Who sponsored the study?
 - ▶ Do the researchers have any vested interest in the results?
2. Is the evidence valid?
 - ▶ Was the study's design appropriate to answer the question?
 - ▶ How were the tasks, subjects, and setting selected?
 - ▶ What data was collected, and what were the methods for collecting the data?
 - ▶ Which methods of data analysis were used, and were they appropriate?
3. Is the evidence important?
 - ▶ What were the study's results?
 - ▶ Are the results credible, and, if so, how accurate are they?
 - ▶ What conclusions were drawn, and are they justified by the results?
 - ▶ Are the results of practical and statistical significance?
4. Can the evidence be used in practice?
 - ▶ Are the study's findings transferable to other industrial settings?
 - ▶ Did the study evaluate all the important outcome measures?
 - ▶ Does the study provide guidelines for practice based on the results?
 - ▶ Are the guidelines well described and easy to use?
 - ▶ Will the benefits of using the guidelines outweigh the costs?
5. Is the evidence in this study consistent with the evidence in other available studies?
 - ▶ Are there good reasons for any apparent inconsistencies?
 - ▶ Have the reasons for any disagreements been investigated?

After Action Review (AAR)

- ▶ What was supposed to happen?
- ▶ What actually happened?
- ▶ Why were there differences?
- ▶ What did we learn?

Postmortem Analysis (PA)

- ▶ What went so well that we want to repeat it?
- ▶ What was useful but could have gone better?
- ▶ What were the mistakes that we want to avoid for the future?
- ▶ What were the reasons for the success or mistakes?
